This approved 1 CEU Credit Course is presented by a Senior Urban Forester with over 30 years experience in Tree Preservation and Porous Paving while working on many high profile, politically sensitive and historically significant projects.

Are you a Municipality dealing with tripping hazards caused by trees heaving and breaking your sidewalks and trails? Are you looking for a better tree surround solution than cast iron tree grates? Would you like a cost effective solution to pave over tree roots without causing any harm?

Are you an A/E professional looking for innovative & proven BMP's to address your project's needs for Low Impact Development, SWM, Impervious Surfaces and Tree Preservation? Would it be helpful to see examples of how the Municipalities and A/E Firms in the nations Capitol are dealing with the same issues?

Look no further! Come see what others are doing to stay ahead of the curve.
