**Be Sure to Ask About:**  
Free Mockups • Rideable Municipal Contracts • Installer Training • Material Sales

This educational lecture explores cutting-edge design and construction strategies for Tree Preservation, Stormwater Management, and Green Infrastructure. Through real-world case studies spanning more than 30 years, the session examines empirical data, cost implications, and the proven efficacy of various methods. By the end of the course, attendees will understand what works, what doesn't and why. Attendees will leave with a toolkit of practical, evidence-based solutions ready to apply to both current and future projects.

This approved 1 CEU Credit Course is presented by a Senior Urban Forester with over 30 years experience in Tree Preservation and Porous Paving while working on many high profile, politically sensitive and historically significant projects nationwide.

Are you a Municipality or University dealing with failing infrastructure and ADA tripping hazards caused by trees roots heaving your sidewalks & trails? Are you looking for a better solution than replacing concrete in-kind? Would you like a long-term, cost-effective and non-invasive solution to pave over tree roots without harming the trees?

Are you an A/E professional looking for innovative & proven BMP's to address your project's needs for Low Impact Development, SWM, Pervious Surfaces and Tree Preservation? Would it be helpful to see examples of how other Municipalities and A/E Firms are already implementing proven solutions? Look no further! Come see what others are doing to stay ahead of the curve.
